BOBIS

A BEGINNER WORKBOOK

Keyboard Superpowers

Find the key. Make the words. Keep your work.

AGES 6-9 WITH AN ADULT / 14 SHORT PRACTICES

Letter mats + practice cards + adult answers

bobis.com.ng | First edition - October 2026

Find the letters

With an adult / 10-15 minutes

NOTICE

A keyboard is a tool for choosing letters, numbers and other actions. The keys are not in alphabet order on a common QWERTY keyboard. That is all right: you can find one letter at a time.

For today, use a pretend name such as Ada. Look at the key, then check what appears on the screen.

TRY TOGETHER

01 Point to A, D and A on the paper mat.

02 With your adult, open a blank local note and type Ada. Your adult may help with the capital.

03 Find the letters in BOBIS and type them, or use lowercase for this first try.

YOUR TURN

Letters I found today:

A pretend name I can type:

- [ ] I can find letters and see them appear.

Adult note: Use any comfortable method. This first session is about recognition, not typing speed.

Answer guidance 1

Accept sensible wording and age-appropriate assistance. The child should show the skill where a device action is required.

01-02 Letters and spaces

Accept the intended letters in ADA or BOBIS. The sentence Ada likes books has three words and two separating spaces.

03-04 Capitals and lines

A/a is one example pair. Lagos has only its first letter capitalised. Enter in a note makes the next line; the task makes three lines.

05-06 Repair and placement

CATX becomes CAT; DOGG becomes DOG. Add s before the full stop to make I like cats.

07 Counts

The child should recognise 0 through 9. After the requested change, Books 3 is the intended count.
